

Advantages of the soft, supple kySsen:

- relieves tenseness
- stops you getting "locked" into one position
- pleasantly springy
- optimal physical recuperation
- odourless
- hand-made washable cover
- Swiss quality

The kyBouncer for your neck helps you sleep peacefully

Everything you need to know about the kySsen

Discover the latest sleep technology with the kySsen, from kybun. This innovative sleep aid is extremely soft but still highly supple. Conventional pillows have a memory effect, so once you fall into one position, you become "locked" into it.

Many people know that feeling of being "locked" in a position from spending a long time sitting in the car or from falling asleep in your chair, if your head is at a "funny" angle.

The kySsen stops this happening; its springiness means it supports you whatever unconscious movements you make in your sleep. The vibrations stop your muscles freezing up and help your neck relax as you sleep.

Karl Müller has followed up his solution for standing positions – the kyBouncer, a success for many years now – with a health-conscious sleep-time solution. The specially developed multi-component polyurethane (PU) treats you to the ultimate in relaxation.

The body needs to become accustomed to this new sleep technology; despite its many benefits, at the start there may be reactions such as restless sleep or increased tension. After just a few days, this initial reaction disappears; your body feels the positive effect. Where your joints once became stiff during the night, the gentle movements mean you will now wake up relaxed and fit. The kySsen makes the night a time for blissful sleep.
